Smart Manufacturing Workstation (990-SM10)

BorgConnect Dashboard Software

Hand-On Skills:

- Basic System Operation & Set-Up
- Temperature Control-Cooling
- Temperature Control-Heating
- Motor Control
- Wireless Temperature Monitoring
- PLC Temperature Monitoring
- Web-Based Condition Monitoring
- Web-Based Power Monitoring
- Wireless Production Counting

Amatrol's Smart Manufacturing Workstation (990-SM10) was developed in partnership with the Clean Energy Smart Manufacturing Innovation Institute (CESMII) to offer hands-on Industry 4.0 applications such as wireless temperature monitoring, web-based condition monitoring, web-based power monitoring, and wireless production counting all within a portable workstation. This system is an ideal training tool for future Smart Factory and Automation technicians.

The Smart Manufacturing Workstation Learning System includes: BorgConnect Hub, BorgConnect Node, Ethernet switch-5-port, Allen-Bradley Micro820 Programmable Controller, AC current sensor, load cell /parts counter, and a Wi-Fi temperature sensor. The system will include an activity guide for practicing specific skills and an installation guide.

Technical Data

Complete technical specifications available upon request.

Allen-Bradley Micro820 PLC
Unmanaged Switch
AC Current Sensor
Loose Current Sensor
BorgConnect Node
BorgConnect Hub
Load Cell / Parts Counter
Cooling Fan / Temperature Sensor
Interlocked Door Vibration Motor
Indicator Lamps
Wi-Fi Temperature Sensor
Rockwell CCW PLC Programming Software
BorgConnect Software
Smart Manufacturing Workstation Activity Guide
Installation Guide (D19405)

Requirements:

Computer, see requirements: www.amatrol.com/support

Options:

Mobile Technology Station (82-610)

Utilities:

Electricity (100-240 VAC, 50/60 Hz, single phase)

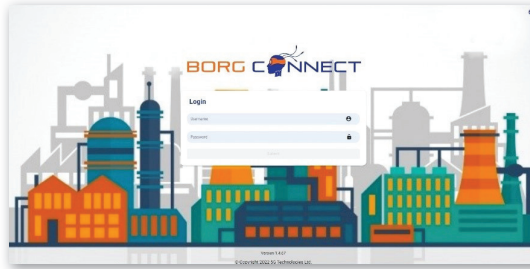

Develop Real-World Smart Factory Skills

The Smart Manufacturing Workstation (990-SM10) includes real-world components found in Smart Factory environments that learners will use to practice hands-on skills. This system also allows for user-supplied remote sensors to be used with the BorgConnect Node to test energy efficiency. Several of the sensors – including the Wi-Fi temperature sensor – can be used to monitor external, real-world components and systems.

Real-World Industry Software for Monitoring Systems

In addition to partnering with CESMII on the 990-SM10, Amatrol worked with 5G to implement their BorgConnect line into this revolutionary product. Users will practice with the BorgConnect Hub and Node to monitor temperature control, energy efficiency, and vibration monitoring skills using BorgConnect software. Learners will also use Rockwell CCW PLC programming software for developing I/O control skills.

Study Smart Factory Concepts on a Portable, Ergonomic, Easy-to-Use System

Amatrol's learning system features a stainless steel panel design in a rugged, flameproof, ABS plastic case. Includes roller wheels, handle, locking mechanism and a pouch in case cover to store loose items, such as cables, loose components, and documentation.

CESMII Mission

Radically accelerate the development and adoption of advanced sensors, controls, platforms, and models, to enable Smart Manufacturing (SM) to become the driving sustainable engine that delivers real-time business improvements in U.S. manufacturing.
